## Amendment

## In The Claims:

Please amend claims 1, 5, 12, 20-23 (cancelled), 24, 25, 26, 29 and 30 (cancelled), 36, 40 and 41 as shown in the complete list of claims below.

- 1. (Amended) A plurality of mounts releasably adhered to a single sheet of a backing material, each mount consisting of a single layer of plastic such as PVC (being made of a single material) and being a mount for mounting paper to glass, and comprising a body having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive.
- 2. (Original) A plurality of mounts according to claim 1, provided in the form of a rall.
- 3. (Original) A plurality of mounts according to claim 1, provided in the form of a flat
- 4. (Original) A plurality of mounts according to claim 1, wherein the first and second surfaces of each mount are mutually opposite.
- 5. (Amended) A plurality of mounts according to claim 1, wherein the first surface of each mount adheres (is capable of adhering ) the mount to only (only to) a part of one surface of the sheet of paper to form the mountable arrangement.
- 6. (Original) A plurality of mounts according to claim 1, wherein each mount is capable of releaseably securing the mountable arrangement directly to glass.
- 7. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is flat.
- 8. (Original) A plurality of mounts according to claim 1, wherein each mount is flexible.
- 9. (Original) A plurality of mounts according to claim 1, wherein each mount is transparent.
- 10. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a plastics material.
- 11. (Original) A plurality of mounts according to claim 10, wherein each mount further comprises a plasticizer.
- 12. (Amended) A plurality of mounts according to claim 11, wherein each mount comprises approximately (at least) 55 parts plasticizer per 100 parts plastics material.
- 13. (Original) A plurality of mounts according to claim 10, wherein the plastics material is polyvinyl chloride.
- 14. (Original) A plurality of mounts according to claim 1, wherein the thickness of each

mount is up to 2 mm.

- 15. (Original) A plurality of mounts according to claim 14, wherein the second surface area of each mount is in the range 100mm² to 900mm².
- 16. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is square, rectangular, triangular or circular.
- 17. (Original) A plurality of mounts according to claim 1, wherein the second surface of each mount is not capable of adhering the mount to paper.
- 18. (Original) A plurality of mounts occording to claim 1, wherein each mount comprises a pigment material.
- 19. (original) A plurality or mounts according TO claim 1, wherein the backing material includes silicone.
- 20. (Cancelled) A device for dispensing a mount including a plurality of mounts as defined in claim 1.
- 21. (Cancelled) A method for making a plurality of mounts as defined in claim 1 comprising the steps of:
- (i) providing the backing material (ii) applying an adhesive coating to a surface of the backing material (III)adhering releasably the mount material to the backing material; and
- (iv)forming the plurality of mounts from the mount material.
- 22. (Cancelled) A method according to claim 21, wherein the plurality of mounts is formed in step (iv) by cutting.
- 23. (Cancelled) A method according to claim 21, wherein the adhesive is applied in step (ii) by a roller or a spray nozzle.
- 24. (Amended) A mount for mounting paper to glass, consisting of a single layer of plastic such as PVC (comprising a body made of a single material), and having a first surface carrying an adhesive coating which adheres the mount to only (capable of adhering the mount only to) a part of one surface of a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
- 25. (Amended) A mount for mounting paper to glass, consisting of a single layer of plastic such as PVC (comprising a body made of a single material) and having a first surface carrying an adhesive coating capable of releasably adhering the mount to a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
- 26. (Amended) A mount according to claim 25, wherein the first surface carrying an adhesive coating, adheres the mount to only (is capable of ahering the mount only

- to) a part of one surface of a sheet of paper to form a mountable arrangement.
- 27. (Original) A mount according to claim 25, wherein the first or second surface of the mount is flat.
- 28. (Original) A mount according to claim 25, wherein the mount is flexible.
- 29. (Cancelled) A mount according to claim 25, wherein the mount comprises a plastics material.
- 30. (Cancelled) A mount according to claim 29, wherein the mount further comprises a plasticizer.
- 31. (Original) A mount according to claim 25, wherein the thickness of the mount is up to 2mm.
- 32. (Original) A mount according to claim 31, wherein the second surface area of the mount is in the range 100mm<sup>2</sup> to 900mm<sup>2</sup>.
- 33. (Original) A mount according to claim 25, wherein the second surface of the mount is not capable of adhering the mount to paper
- 34. (Original) A mount according to claim 25, wherein the first surface of the mount is adhered releasably to a backing material.
- 35. (Original) A mount according to claim 25, wherein the entire surface of the mount is adhered to less than half of the area of a surface of a sheet of paper for permitting the sheet of paper to be mounted to glass.
- 36. (Amended) A method for securing a first material to a second material. comprising:
- releasably adhering a first surface of a mount to the first material with an adhesive coating carried by the first surface, wherein the mount and first material form a mountable arrangement; and
- securing a second surface of the mount to the second material without adhesive, where the first and second surfaces are mutually opposite and the mount <u>consists of a single layer of plastic such as PVC</u> (comprises a body made of a single material).
- 37. (Previously Presented) The method according to claim 36, wherein the first material is a paper-based material.
- 38. (Previously Presented) The method according to claim 36, wherein the second material is a glass-based material.
- 39. (Previously Presented) The method according to claim 36, wherein the second material has a smooth surface.
- 40. (Amended) A method for securing a first material to a second material. comprising:
- adhering a first surface of a mount to a part of one surface of a sheet of paper with an adhesive coating carried by the first surface, wherein the mount and the sheet of paper form a mountable arrangement; and

- securing a second surface of the mount to glass without adhesive, where the first and second surfaces are mutually opposite and <u>each mount consists of a single layer of plastic such as PVC</u> (the mount comprises a body made of a single material).
- 41. (Amended) A mount arrangement for mounting paper to glass comprising: a plurality or mounts, each mount consisting of a single layer of plastic such as PVC (consisting of a single layer of soft plastic such as PVC) and having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
